

About Us

We only use A+ Certified technicians that have more than SIX years experience in the computer industry, usually the technician that you will receive for your onsite service will have more than ten years experience. Our company has a strict policy when hiring new employees we want to make sure the technician you receive will have seen the issues you are having before and have a quick and inexpensive solution. We use to do onsite service for most of the computer stores in Barrie. There are about 40 computer stores in Barrie, ten of them do onsite service, we use to do most of the service for at least five of those companies. Why call us directly, YOU WILL SAVE MONEY!!! We are faster and more accurate at repairing all issues. Allot of onsite computer companies either don't actually have an office, or home office in their basement and still charge full rates. Plus how reliable are their results. We guarantee our service either in house or onsite, if for any reason you are not happy with our service please give us a call and we will take care of everything. We do not hire co-op students, or minimum wage technicians, what is the reason for this? When our technicians come to your house we know that they will be able to diagnose the issues rapidly, and find a great solution to any computer related problems that you may have. Some computer stores to save money hire co-op students and are they the ones trying to repair your computer? Also this ensures that every customer will have an excellent experience with Mobile Computer Service. We have same day service, next day, and Rapid Response, which puts you next in line usually within a couple hours. The products that we sell are only brand name items, usually business machines that were built to last. Big box stores are usually not worried about the quality in their machines but only the price, and when the price goes down so does the quality. With our networking specialists there is no need to worry about your home or business network, when we set it up, we can share files, internet connection, and printers.
